  • Webpack
  • RESTful Services/APIs
  • Responsive Design
  • Cross-Browser Development

Backend knowledge:
  • Node.js/Express.js/NestJS
  • MongoDB
  • Firebase

Professional Summary

I've started my development path as a front-end web developer using Angular 2+. Thru the last 4 years, I've got great experience in many different commercial projects. I've worked with high-pressure tasks and ensured stability and high performance every single time.

Besides my experience as a front-end developer, I continuing pushing the boundaries of my tech skills and successfully completed NestJS courses. Due to this I already have commercial experience with Node.js (NestJS + MongoDB).

Having decent experience in these areas, I am still open to learning more, getting new achievements, and grow as a professional.

I'm sure that hiring me will help to push your project to new limits.
